RNA prepared and library constructed by W. Walter Lorenz, School of
Foreerry, University of Georgia; plant material prepared at the
Foreerry, University of Florida; sequencing done in the Laboratory for
Genomics and Bioinformatics, University of Georgia. Sequence ends
have been trimmed to exclude vector and regions below Phred quality
16. Three-prime sequences are presented as their reverse complement
and have been trimmed to exclude polyA.
Seq primer: JENREY (CAGGAAACAGCTATGACC).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CF397293 1709.21 A022 Drought-stressed loblolly pine roots DS3 Pinus taeds cDNA clone RTDS3_2 A09_802 5', mRNA sequence.

/close "Vector: Uni-ZAP XR; ecotype: Landes; The library made from the roots of 6 weeks old seedlings grown in hydroponic conditions. A three weeks drought stress hydroponic conditions. A three weeks drought stress treatment was applied by lowering the osmetic potential of the nutrient solution to -0.45 MPa using 170 g/l of polyethylene glycol as an osmoticum. A mixture of polyethylene glycol as an osmoticum. A mixture of genotypes were used. Oligo-dr primed cDNA was directionally cloned into the EcoRI-Xhol lambda-ZAP vector arms and mass-excised to form a pBluescript phagemid"

RNA prepared and library constructed by W. Walter Lorenz, School of Porestry, University of Georgia; plant material prepared at the Porestry, University of Georgia; plant material prepared at the Genomics and Bioinformatics, University of Georgia. Sequence ends have been trimmed to exclude vector and regions below Phred quality 16. Three-prime sequences are presented as their reverse complement and have been trimmed to exclude polyA.
Seq primer: JENREV (CAGGAAACAGCTATGACC).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1611 ATGATGTCTGGCTGGGGAAGACTGTGTATAAGATGCTATATGTGAGCAACGAAAAATATT 1670

/lone lib="Drought-stressed loblolly pine roots DS1"
/note="vector: pSL1180; Site 1: EcoRI; Site 2: XhoI; The
library was prepared from pol/A+ RNA from drought-stressed
loblolly pine (Pinus taeda) roots. Water was withheld from
ramet clones until predawn needle water potential reached
1.75 MPa. On day 7 roots were harvested for RNA
isolation. Double-stranded cDNA was cloned
unidirectionally into pSL1180. Inserts excised with EcoRI
(5' end) and XhoI (3' end)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Email: mmpratt@uga.edu
RNA prepared and library constructed by W. Walter Lorenz, School of
Forestry, University of Georgia; plant material prepared at the
Forestry, University of Georgia; plant material prepared at the
University of Florida; sequencing done in the Laboratory for
Genomics and Bioinformatics, University of Georgia. Sequence ends
have been trimmed to exclude vector and regions below Phred quality
16. Three-prime sequences are presented as their reverse complement
and have been trimmed to exclude polyA.
Seq primer: JURISY (CAGGAAACAGCTATGACC).

RNA prepared and library constructed by W. Walter Lorenz, School of

RNA prepared and library constructed by W. Walter Lorenz, School of

Forestry, University of Georgia; plant material prepared at the

Genomics and Bioinformatics, University of Georgia. Sequence ends

have been trimmed to exclude vector and regions below Phred quality

16. Three-prime sequences are presented as their reverse complement

and have been trimmed to exclude polyA.

Seq primer: JENREY (GAGGAAACAGCTATGACC).

RNA prepared and library constructed by W. Walter Lorenz, School of
Forestry, University of Georgia; plant material prepared at the
University of Florida; sequencing done in the Laboratory for
Genomics and Bioinformatics, University of Georgia. Sequence ends
have been trimmed to exclude vector and regions below Phred quality
16. Three-prime sequences are presented as their reverse complement
and have been trimmed to exclude polyA.

/note="Vector: pSi1180; Site 1: ECORI; Site 2: Xhoi; The library was prepared from polyA+ RNA from lobiolity pine (Finus taeda) roots watered to pot capacity every other day. Pre-dawn water potential remained -0.3 MPa +/-0.1. Roots were harvested for RNA isolation. Double-stranded cDNA was cloned unidirectionally into pSi1180. Inserts excised with ECORI (5' end) and Xhoi (3' end)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2127

/note="Vector: pBluescript SK+; Site_1: EcoRI (5'-end of CDNA); Site_2: XhoI (3'-end of CDNA); developing caryopsis, $6.15 DAP(days after pollination) Due to a cloning artefact caused by the kit, in most cases the EcoRI site is NOT present, as well as the EcoRIadapter used for cloning. To excise the insert, restriction sites upstream EcoRI should be used (e.g. BamHI, Sall, PStI).
NOTE: Also due to the cloning system used Blue/white selection for recombinats is not 100% reliable."

An unidirectional cDNA library generated from Unidirectional cDNA library generated from [Inflorescence at begining of development (ice-long)]. cDNA was prepared from polyA+mRNA using SuperScript Plasmid System Kit (Invitrogen). The double-strand cDNAs were fractionated in a sepharose CL-2B 40cm-columns and fragments sixing between 0.8 and 1.5 Kb were directionally cloned into the vector. Details of each source of RNA and library construction can be obtained at http://sucest.lad.ic.unicamp.br/public"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      476 ACCCTATACAGGATGCCTCTTGTGAATAACGACATATATCTTGATTTTGGCATAATGGAT 535

New purified and isolated nucleic acid sequence encoding a levopimaradiene synthase useful for producing pure ginkgolides in cells.

Claim 20; Fig 4; 37pp; English.

The invention relates to a purified and isolated nucleic acid sequence encoding a levopimaradiene synthase. The nucleic acid is used for the preparation of a ginkgolide in a cell, an expression vector, a unicellular organism (e.g. Saccharomyces, Escherichia coli, Candida albicans or Kluyeromyces lactis), a yeast host cell, a plant (particularly Ginkgo biloba), a host cell, a transgenic plant or a seed of the transgenic plant, for the biosynthesis of ginkgolides and in molecular biology, molecular genetics, and organic chemistry. The nucleic acid is capable of producing large amounts of pure ginkgolides in a costeffective manner, particularly in an organism capable of a high-yield sinkgolide-producing system. This sequence represents a levopimaradiene synthase polypeptide of the invention

```
The present invention describes an isolated terpene synthase (I)

Comprising a region with at least 20% identity to region 265-535 of a 548

comprising a region with at least 20% identity to region 265-535 of a shall an early a sequence (la), given in AAY90811. (I) contains nine alpha carbon atoms (alphaC) that have interactomic distances, between each other, within tabulated ranges, have a centre point (within a sphere of radius 2.3 Angstrom) within tabulated arange, and have an ordered arrangement of R groups (defining as side chains), excluding specific tabulated arrangements (tables given in the specification). (I), and cralted enzymes, are used to produce a wide range of terpenoids (e.g. cyclic, acylic, optionally hydroxylated), useful e.g. as fragrances, flavours, pheromones, defensive agents, pigments, antitumour agents, components of signal transduction pathways, precusors of steroid confidence of signal transduction pathways, precusors of steroid confidence components of signal transduction pathways, precusors of steroid confidence of signal transduction pathways, precusors of steroid confidence of signal transduction pathways, precusors of steroid confidence of signal transduction pathways, precusors of steroid confidence of signal transduction pathways, precusors of steroid concounts them) are used as controls in the analysis of products formed by encoding them) are used as controls in the analysis of produces or develop immunological reagents or nucleic acids for monitoring expression of terpene synthases or inheritance of the gene in controls. The present invention describes the heterologous expression of taxane analogues, comprising cloning a DNA sequence comprising a taxane synthesis pathway, making a DNA construct in which the DNA sequence is under control of regulatory elements, introducing the DNA construct into a host cell, growing the host cell to produce taxane analogues, and recovering the required taxane from the culture medium. Also described: (1) an isolated DNA sequence comprising the taxane synthesis pathway, (preferably taxol synthesis pathway); (2) an expression vector comprising that isolated DNA sequence; and (3) a host cell comprising a taxane synthesis pathway derived from a taxane-producing organism, plant or tree, the taxane synthesis pathway is foreign to the host cell. The taxane analogues have cytostatic activity, and so can be used as an analogues have cytostatic activity, and so can be used as an analogues protein, which is given in an example from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             115

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a purified and isolated nucleic acid sequence encoding a levophmaradiene synthase. The nucleic acid is used for the preparation of a ginkgolide in a cell, an expression vector, a unicellular organism (e.g. Saccharomyces, Escherichia coli, Candida albicans or Kluyeromyces lactis), a yeast host cell, a plant (particularly Ginkgo biloba), a host cell, a transgenic plant or a seed of the transgenic plant, for the biosynthesis of ginkgolides and in molecular biology, molecular genetics, and organic chemistry. The nucleic acid is capable of producing large amounts of pure ginkgolides in a cost-effective manner, particularly in an organism capable of a high-yield
                                                                                                         713
                                                                                                                            777
                                                                                                                                            773

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This is the sequence of an E-alpha-bisabolene synthase polypeptide encoded by a computer-generated nucleic acid (see AAX87530) based on an isolated grand fir (Ables grandis) E-alpha-bisabolene synthase clone (see AAX87544). It contains conservative amino acid substitutions relative to the native sequence (see AAY06562). E-alpha-bisabolene synthase is a cound-inducible enzyme capable of generating multiple sesquiterpenes, especially E-alpha-bisabolene, from farnesyl diphosphate. The invention provides gymnosperm sesquiterpene synthase nucleic acids and recombinant proteins, as well as expression vectors, and a method of imparting or enhancing production of a gymnosperm sequiterpene synthase in a prockaryotic or eukaryotic host cell, especially in a plant, in order to impart, enhance or modify production of sesquiterpenoids, and hence to alter teclogical interactions mediated by farnesyl ciphosphate and its derivatives
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      194
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  253

                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence represents the B-alpha-bisabolene synthase of grand fir (Abies grandis), a wound-inducible enzyme capable of generating multiple esquiterpenes, especially B-alpha-bisabolene, from farnesyl diphosphate. Another deduced sequence (see AAY06566) for the enzyme has Val at position 65. The invention provides gymnosperm sesquiterpene synthase nucleic acids and recombinant proteins, as well as expression vectors, and a method of imparting or enhancing production of a gymnosperm sesquiterpene synthase in a prokaryotic or eukaryotic host cell, especially in a plant, in order to impart, enhance or modify production of sesquiterpenoids, and hence to alter the flavour or fragrance of plant products, to improve disease resistance or to alter ecological interactions mediated by farnesyl diphosphate and its derivatives
                                                                                                                                                                                                                                                                                                                                                                            434 EKGDFFCFAGGTQIGYTDNINLYRCSQVCFPGEKIMEEAKTFTTNHLQNALAKNNAFDKW

The nucleic acid is used for the preparation of a ginkgolide in a cell, an expression vector, a unicellular organism (e.g. Saccharomyces, Bscherichia coll, Candida albicans or Kluyeromyces lactis), a yeast host cell, a plant (particularly Ginkgo biloba), a host cell, a transgenic plant or a seed (particularly Ginkgo biloba), a host cell, a transgenic plant or a seed of the transgenic plant, for the biosynthesis of ginkgolides and in of the transgenic plant, for the biosynthesis of ginkgolides and in effective manner, particularly in an organism capable of a high-yield ginkgolide-producing system. This sequence represents an B-alphabisabolene synthase polypoptide which shows similarity to the levopimaradiene synthase of the invention
                                                                                                                                                       734
                                                                                                                                                                                                                      850
New purified and isolated nucleic acid sequence encoding a
levopimaradiene synthase useful for producing pure ginkgolides in cells
                                                                                                                                                                                                                   791 MRENPECTEERALSHVYGIIDNALKELNWELANPASNAPLCVRRLLFNTARVMQLFYMYR

```

This sequence represents the B-alpha-bisabolene synthase of grand fir (Abies grandis), a wound-inducible enzyme capable of generating multiple sesquiterpenes, especially E-alpha-bisabolene, from farnesyl diphosphate. The sequence differs from the sequence of B-alpha bisavolene synthase AGI (see AAY06562) by a single residue, AGI having an Ala residue at position 55. The invention provides symnosperm sesquiterpene synthase nucleic acids and recombinant proteins, as well as expression vectors, and a method of imparting or enhancing production of a symnosperm sesquiterpene synthase in a prokaryotic or eukaryotic host cell, especially in a plant, in order to impart, enhance or modify production of sesquiterpenoids, and hence to alter the flavour or fragrance of plant products, to improve disease resistance or to alter ecological interactions mediated by farnesyl diphosphate and its derivatives 136 256 316 136 194 253 196 313 373 375 433 493 9/ LSSPASTACVFMHTQNKRCLHFLNFVLSKFGDYVPCHYPLDLFERLWAVDTVERLGIDRY RLNADYHPAVWKDDFIDSLTSPNSHATSKSSVDETINKRIQTLVKBIQCMFQS--MGDGB ACLLTLKIWNKGDIQVQKGVEFVRKHMBEMKDEAD-NHRPSGFEVVFPAMLDEAKSLGLD LPYHLPFISQIHQKRQKKLQKIPLNVLHNHQTALLYSLEGLQDVVDWQEITNLQSRDGSF FKKEIKESLDYVYRYWDAERGVGWARCNPIPDVDDTAMGLRILRLHGYNVSSDVLENFRD **EKGDFFCFAGQTQIGVTDNLNLYRCSQVCFPGEKIMEEAKTFTTNHLQNALAKNNAFDKW** Gaps 'n Grand fir (Abies grandis) sesquiterpene synthase genes and protein products, useful for sesquiterpenoid production. residues function 19; 2; Length 817; ñ Indels Steele element, Asp red divalent cation 45.5%; Score 2113.5; DB 2; llarity 49.5%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               313
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    256
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        373
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              433
AAX87504). It contains conservative amino acid substitutions relative to the native sequence (see AAY0552). B-alpha-bisabolene synthase is a two mud-inducible enzyme capable of generating multiple sesquiterpenes, especially E-alpha-bisabolene, from farnesyl diphosphate. The invention provides gymnosperm sesquiterpene synthase nucleic acids and recombinant proteins, as well as expression vectors, and a method of imparting or enhancing production of a gymnosperm sesquiterpene synthase in a enhancing production of a gymnosperm sesquiterpene synthase in a prokaryotic or eukaryotic host cell, especially in a plant, in order to impart, enhance or modify production of sesquiterpenoids, and hence to alter the flavour or fragrance of plant products, to improve disease resistance or to alter ecological interactions mediated by farnesyl diphosphate and its derivatives
                                                                                                                                                                                                                                                                                                                                                                                                                                                T--NESAYDTAWVARIPSIDGSGAPQFPQTLQWILNNQLPDGSWGEECIFLAYDRVLNTL 194

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes the heterologous expression of taxane analogues, comprising a DNA sequence comprising a taxane synthesis pathway, making a DNA construct in which the DNA sequence is under control of regulatory elements, introducing the DNA construct into a host cell, growing the host cell to produce taxane analogues, and recovering the required taxane from the culture medium. Also described: (1) an isolated DNA sequence comprising the taxane synthesis pathway, the isolated DNA sequence comprising the taxane synthesis pathway expression vector comprising the isolated DNA sequence; and (3) a host cell comprising a taxane synthesis pathway derived from a taxane-producing organism, plant or tree, the taxane synthesis pathway is foreign to the host cell. The axane analogues have cytostatic activity, and so can be used as anticancer agents. The present sequence represents a taxadiene synthase homologous protein, which is given in an example from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              T--NPSAYDTAWVARIPSIDGSGAPQFPQTLQWILNNQLPDGSWGEECIFLAYDRVLNTL 194

Nucleotide sequences encoding mycrene synthase, limonene synthase and pincaputhase from Grand fir may be incorporated into any organism (e.g. intact plant, animal, microbe), or derived cell culture that produces geranyl diphosphate for the production of the aforementioned calls may also be used for the production of the aforementioned cancer properties, improvement of defense capability, and the alteration of that derivatives. In particular they can be used for the production of other ecological interactions mediated by mycrene, limonene, pinene, or their derivatives. In particular they can be used for the production of plant seeds for the extraction of oil or meal. cDNAs encoding myrcene synthase, pinene synthase and limonene synthase from Grand Fir were solated and sequenced by the following procedure. Based on comparison of sequences of different plant synthase enzymes, four conserved sequences capability and the other three sense primers of the construction of four degenerate primers (AAXO8646 and AAXO8645 generated a PCR product which was 110 base pairs in compath. The amplified product was used in a plasmid construct to transform E.coli XLI-Blue cells and the inserts were sequenced. Four probes (AAXO8650-53) were devised from the sequenced insert and were used to screen a Grand Fit cDNA library. One of these clones identified are synthase sequence given in AAXO8649. The other clones identified are synthase sequence given in AAXO8649. The other clones identified are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RYWDAERGVGWARCNPIPDVDDTAMGLRILRLHGYNVSSDVLENFRDEKGDFFCFAGQTQ 446
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        IGVTDNINLYRCSQVCFPGEKIMEEAKTFTTNHLQNALAKNNAFDKWAVKKDLPGEVEYA 506
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ETQHIVSWWRESGFNDLTFTRQRPVEMYFSVAVSMFEPEFFAACRIAYAKTSCLAVILDDL 626

```
The present invention describes an isolated terpene synthase (I) comprising a region with at least 20% identity to region 265-535 of a 548 amino acid (as) sequence (Ia), given in AAY90831. (I) contains nine alpha carbon atoms (alphaC) that have interatomic distances, between each other, within tabulated ranges, have a centre point (within a sphere of
                                                                                                                                                                                                                                                                                                                                                                                                                                         Synthase; protein co-ordinate data; active site; modification; terpenoid; 3-dimensional coordinate; alpha carbon atom; plant; terpene synthase; isoprenoid; breeding programme; fragrance; flavour; pheromone; defensive agent; plyment; antitumour; steroid hormone; signal transduction pathway; blia caid; affinity purification; photoreceptor; enzymatic synthesis; nutrient supplement; immunological reagent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           producing terpene
agents, are derived from known

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                 arrangement of R groups (defining as side chains), excluding specific tabulated arrangements (tables given in the specification). (1), and related enzymes, are used to produce a wide range of terpenoids (e.g. cyclic, acylic, optionally hydroxylated), useful e.g. as fragrances, flavours, pheromones, defensive agents, pigments, antitumour agents, components of signal transduction pathways, precursors of steroid hormones and bile acids, as photoreceptors and as co-factor side chains. Some synthases with little or no catalytic activity (and nucleic acids corocidity then) are used as controls in the analysis of products formed by encoding then) are used as controls in the analysis of products formed by corymatic synthesis; as nutrient supplements; for affinity purification of isoprenoids; or to develop immunological reagents or nucleic acids for monitoring expression of terpene synthase may produce novel terpene products.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention provides the protein and coding sequences of monoterpene synthases from the grand fir. These include (-)-camphene synthase, (-)-beta-phellandrene synthase, terpinolene synthase, (-)-lalpha-pinene synthase, limonene synthase, myrcene synthase and pinene synthase. The sequences can be used to produce transgenic plants expressing high levels of the enzymes, resulting in levels which are useful in protecting against and treating cancers, and to confer insect resistance on plants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DPIDSLTSPNSHATSKSSVDETINKRIQTLVKEIQCMFQS--MGDGBT--NPSAYDTAWV

The present invention describes the heterologous expression of taxane analogues, comprising cloning a DNA sequence comprising a taxane synthesis pathway, making a DNA construct in which the DNA sequence is under control of regulatory elements, introducing the DNA sequence is a host cell, growing the host cell to produce taxane analogues, and recovering the required taxane from the culture medium. Also described: (1) an isolated DNA sequence comprising the taxane synthesis pathway); (2) an isolated DNA sequence; and (3) a host cell comprising the isolated DNA sequence; and (3) a host cell comprising a taxane synthesis pathway derived from a taxane-producing organism, plant or tree, the taxane synthesis pathway is foreign to the host cell. The taxane analogues have cytostatic activity, and so can be used as homologous protein, which is given in an example from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ġ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SFFRKGWEDYLLGYYEEAEWLAAEYVPTLDEXIRNGITSIGQRILLLSGVLIMDGQLLSQ 652
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           506

                                                        This is a cloned pacific yew taxadiene synthase (TS) protein. The sequence can be used to increase to increase taxol biosynthesis into taxoids in transformed cells. The protein can be modified to improved efficiency, and to redirect the targeting of the expressed polypoptide. The modifications can be to alter catalytic efficiency, to modify substrate utilisation, and to alter product outcome. The antibodies specific for the mature native pacific yew TS polypeptide can be used to purify TS polypeptides, cloning TS homologues from Pacific yew or other plant species, and as probes for blots and immunoassays
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     11 KMNALGNKAIHDPTNCRAKSERQMMWVCSRSGRTRVKMSRGSGGPGPVVMMSSSTGTSKV 70

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 5
